# How to setup SmartDNS

Allowlist your IP address

Log into your VPN service account, allowlist your IP address, and activate SmartDNS. If you don't have an account, sign up for one.

Configure your Apple TV

Select your Wi-Fi connection and enter the SmartDNS server address.

Enjoy your favorite content

After configuring your Apple TV, you can experience a smooth and stable connection. Remember, however, that SmartDNS doesn't protect your devices the way a VPN connection does.
