

10 reasons to use a VPN

1. Browse privately

A VPN encrypts your online activity and gives you a new IP address.

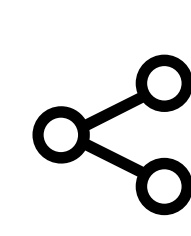

2. Bypass censorship

Go anywhere. Access anything. A VPN lets you connect to other countries.

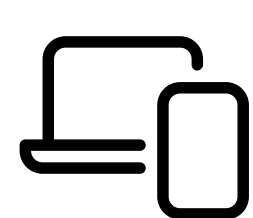

3. Secure public Wi-Fi

Make hotel, airport, and cafe Wi-Fi safe by encrypting your traffic.

4. Access your files remotely

Access photos and files on your home computer from abroad.

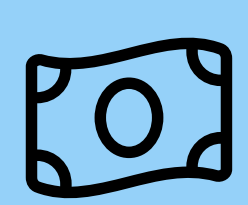

5. Protect your mobile devices

Download a VPN for tablets, smartphones, laptops, and TVs.

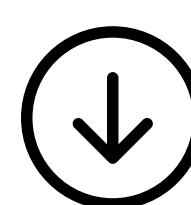

6. Work and study from anywhere

Access your work or university network from anywhere in the world.

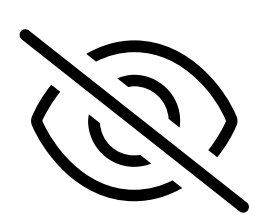

7. Save money on flights, hotels and, rentals

Connect to other countries to stop price discrimination.

8. Download and upload securely

Encrypt your connection and stop snoopers.

9. Protect your right to privacy

Stop intrusive monitoring, government surveillance, and third-party spying.

10. Protect your identity

Hide your IP address and online behavior from scammers, spies, and your ISP.
