

# How to install a VPN on your router

## Log in to your router:

Type your router’s IP address and password into your browser to log in to the admin panel.

## Configure your router:

Adjust your router by setting up a VPN. Just make sure that it supports OpenVPN as a client.

## Test it!

Check if your VPN connection works before surfing. To change VPN settings, you’ll have to log in to your router again.

## VPN on a router vs. VPN on a device

Protects the whole network

Protects one device

Takes time to configure

Easy to set up

Changing a server requires to log in to your router and adjust your settings

Changing a server requires one click

Works only locally

Works on the go
